CORE COMPETENCIES

Full-Stack Development
Mobile App Development
Cybersecurity
REST API Design
WordPress Development
Flutter Development
Cloud Infrastructure
Performance Optimization
UI/UX Design
Clean Code & Agile

TECHNICAL SKILLS

Languages PHP, JavaScript, HTML5, CSS3, SQL
Frontend React.js, Bootstrap, Tailwind CSS, AJAX, jQuery
Backend PHP, REST API, Auth, CRUD, MVC
Mobile Flutter, Android, iOS
CMS WordPress, WooCommerce, Blogger
Database MySQL
Security OWASP Top 10, Cloudflare, SSL, Website Hardening
SEO & Marketing Technical SEO, Google AdSense, Analytics, Search Console
Hosting Linux, cPanel, DNS, Apache, Nginx
Tools Git, GitHub, VS Code, Cursor AI, Figma, Postman, Composer, npm
CERTIFICATIONS
[Google Certification]
[Microsoft Certification]
[Meta Certification]
[Cisco Certification]
[EC-Council Certification]
[freeCodeCamp Certification]
[TryHackMe Certification]
[HackerRank Certification]

LANGUAGES

Arabic — Native
English — Professional Working Proficiency

PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Engineer and Mobile Application Developer with hands-on expertise across PHP, React.js, Flutter, and WordPress ecosystems, complemented by a strong cybersecurity foundation. Proven track record designing scalable REST APIs, secure database architectures, and high-performance SaaS and digital product platforms. Adept at hardening applications against OWASP Top 10 vulnerabilities, optimizing Cloudflare-backed infrastructure, and driving measurable gains in technical SEO and Google AdSense revenue. Combines a security-first mindset with clean-architecture principles and a passion for building polished, production-ready digital products for global audiences.

PROFESSIONAL EXPERIENCE

Full-Stack Web & Mobile Developer (Freelance) | Independent / Remote Clients 20XX — Present

- Designed and shipped full-stack web platforms using PHP (CakePHP, Laravel), MySQL, and React.js, architecting REST APIs and MVC-based backends that improved maintainability and cut deployment time.
- Built and hardened SaaS-style monetization platforms — URL shorteners, ad networks, and revenue-sharing systems — implementing authentication, real-time analytics, multi-level CPM advertising, and secure payment flows.
- Applied a security-first approach across all projects — OWASP Top 10 mitigation, Cloudflare configuration, and SSL/DNS hardening — reducing exposure to common web vulnerabilities.
- Developed cross-platform mobile applications with Flutter for Android and iOS, delivering consistent UI/UX and native-level performance from a single codebase.
- Engineered custom WordPress and WooCommerce solutions, including bespoke themes, safelink plugins, and e-commerce storefronts optimized for speed and conversion.
- Executed technical SEO audits and Google AdSense optimization strategies, increasing organic visibility and ad revenue for content-driven client sites.
- Managed end-to-end Linux server administration (cPanel, Apache/Nginx, DNS) for client deployments, ensuring high availability and fast page-load performance.

Mobile Device Repair Technician | Independent Practice 20XX — Present

- Diagnosed and repaired hardware and software faults across a wide range of smartphone models, applying the same precision and analytical rigor used in software engineering work.

KEY ACHIEVEMENTS

- Architected a 14-table relational database schema and installation wizard for a bilingual (Arabic/English) multi-network publisher management platform.
- Rebuilt a Laravel-based ad network as a self-contained, dependency-free PHP installer to simplify deployment on shared hosting environments.
- Delivered a fully custom WordPress safelink plugin with reCAPTCHA, multi-step timers, dual ad-slot management, and source-code protection across multiple iterative releases.
- Diagnosed and resolved complex CPM advertising system defects, including database schema fixes and form-logic corrections, restoring full platform functionality for production use.

FEATURED PROJECTS

Cutlyx — Professional URL Shortener & Monetization Platform

Secure authentication, analytics dashboard, link monetization engine, and a fully responsive, scalable architecture built for high-traffic usage.

CodeLoop Store — Digital Marketplace

WooCommerce-powered storefront with integrated payment gateway, product management system, customer dashboard, and performance-tuned WordPress backend.

Forexawy Blog — Professional WordPress Financial Blog

Custom-built theme with technical SEO optimization, high-performance caching, fully responsive design, and Google AdSense revenue optimization.

CutlyX Pro — WordPress Safelink Plugin

Full-featured safelink system with reCAPTCHA, multi-step timers, 20 configurable ad slots, source-code protection, and a complete design customization panel.
